Circutor

DSO Monitor_Scout

,

Code: W10330.

Description

Monitor all your transformer substations with an intuitive tool that makes it easy to analyse large volumes of data, giving you the crucial information you need to ensure the proper operation of your CTs and guarantee the service to your customers.

Scout transforms the data from your facilities into alerts, reported using an advanced analysis system. Centralize information and streamline decision-making on a single collaborative platform, guaranteeing quick and effective responses. It also offers specialized analysis tools and a mobile app to keep you informed and in control from anywhere.

Main characteristics:

· Multi-site monitoring

Manage and monitor multiple installations from a single platform. Consolidate all the information in one place for a comprehensive overview.

· Prioritized alerts

Receive alerts generated from an advanced data analysis to focus quickly on the most critical problems.

· Clear and contextualized information

Each alert includes relevant information and recommendations so you can take informed decisions and deal with any issues efficiently.

· Collaborative communication and analysis tool

Use real-time chats and specialized analysis tools in independent spaces to collaborate and share information with your team.

· Mobile app

Manage alerts and collaborate in real time from anywhere with instant notifications and access to detailed information in the mobile app (Android and iOS).

· Generation of advanced reports

Create and share clear and structured reports based on the data from your facilities.

· Easy to implement

Integrate devices into the platform easily using a unique identifier, and start monitoring in minutes.

· Maximum end-to-end security

Trust top-tier ISO 27001-certified cloud providers, with robust privacy policies to protect your information.

· Flexibility and scalability in the cloud

Adapt the capacity based on your needs with a fast-implementing platform to ensure unlimited growth.
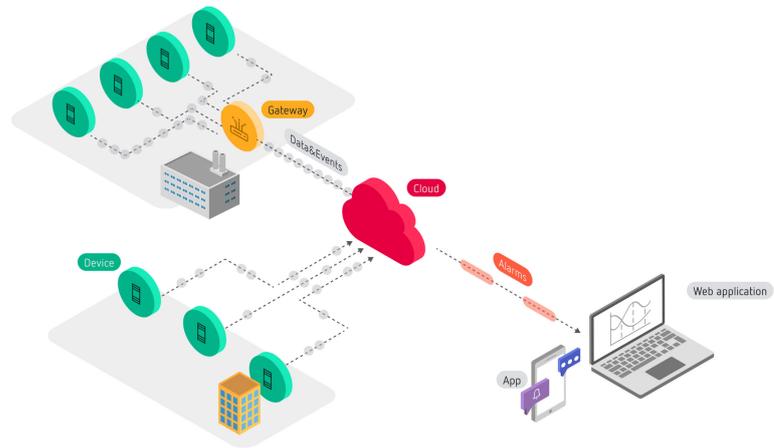

· Interoperability

Connect to your existing tools using an open and documented API to improve your workflows.

DSO Monitor

DSO Monitor_Scout

Electrical monitoring and auditing software

Code: W10330.

Application

Scout offers a variety of specialized modules, each focused on a key aspect of facility monitoring.
DSO Monitor: Monitoring and operation of transformer substations

Manage your centres with a focus on analysing the power quality, processing events and identifying anomalies in the distribution network.

The **DSO Monitor** module provides an alert system that only shows information of relevance to the distributor, giving users a clear display of related alerts and connecting them between different transformer substations.

Data collection and processing allows preventive maintenance actions to be implemented, minimizing supply interruptions and the need for corrective maintenance. By integrating information from multiple devices, you can prepare operational diagnostics at the transformer substation level and compare the health of each installation with similar ones.

Ideal for:

- Energy distributors: Improve the stability of the distribution network
- Monitor transformer substations: Protection against power quality problems.
- Diagnosis and maintenance: Regulatory compliance and operational efficiency

Compatible devices:

Advanced Remote Monitoring (**R-SABT**)
